SUMMARY

Master of IT (Computing) graduate from the University of Melbourne with proven experience across full-stack web development, data analytics, process automation, and Agile delivery. Currently building a production booking platform for a real Melbourne client using React, TypeScript, and Firebase. Demonstrated ability to bridge technical and business domains — from designing systems from first principles to automating enterprise workflows at scale. Targeting a graduate role in software development, IT consulting, or technical project coordination as the foundation for a career in Solutions Architecture or Project Management.

WORK EXPERIENCE

CPT Project Lead / Front Office & Bell Attendant | *Crown Melbourne*

Jun 2022 – Mar 2025

- Led a cross-hotel technical initiative across 3 Crown properties, coordinating stakeholders from Front Office, IT, and Hotel Management — resulting in a 10% reduction in technical service requests.
- Designed and deployed Excel VBA macros to automate manual data entry workflows in the Opera PMS, eliminating repetitive processing and improving data accuracy across a team handling 300+ daily transactions.
- Identified process bottlenecks in guest operations and proposed system-level improvements, translating operational pain points into actionable technical solutions.
- Managed high-volume guest operations (reservations, payments, guest profiles) in a fast-paced, high-stakes environment, building stakeholder communication and prioritisation skills directly applicable to project coordination.

Intern Programmer | *Doodel Delivery*

Dec 2021 – Mar 2022

- Contributed to the development of 2 production mobile and web applications using React and Shopify APIs, modifying and extending live codebases within an Agile delivery framework.
- Designed use cases for key user flows across both applications, translating business requirements into structured development tasks and bridging the gap between product intent and technical implementation.
- Analysed existing systems from a user-experience perspective and surfaced improvement opportunities, several of which were adopted into the development backlog.

Manager | *James An College*

Jan 2018 – Dec 2020

- Managed day-to-day operations, finance, and contract administration for 60+ clients weekly, maintaining accuracy under high-volume conditions.
- Supervised a small team across scheduling, performance, and escalations — building foundational people management experience.

PROJECTS

Sua Hair — Salon Booking & Management Platform — *React · TypeScript · Firebase · React Router · Vite* · **In Development** — **Real Client** · github.com/SJKangAU/sua-hair

Full-stack booking and admin platform built for Sua Hair Studio, one of Melbourne's top Korean hair salons (sua-hair.com.au). Replaces a fully manual phone-based booking process with a real-time web application supporting 5 stylists. Features include a multi-step customer booking flow, real-time availability engine, admin dashboard with timeline view, client management, and service/pricing management with full price history. Sole developer — responsible for architecture, data modelling, and full delivery.

Developer Portfolio — *React · TypeScript · Firebase Hosting* · **Live** · sjkang.dev

Personal portfolio site showcasing projects, technical skills, and career trajectory. Built with React and TypeScript, deployed via Firebase Hosting at sjkang.dev.

IntelliJourney — *React · TypeScript · Firebase · Canvas LMS API*

Full-stack analytics and reporting platform integrating the Canvas LMS API with Firebase to surface actionable educational data insights for students and educators. Deployed to production via Firebase Hosting.

Recipe App — [React · Firebase](#)

Full-stack web application with real-time database sync and user authentication, enabling users to upload, review, and rate recipes. Implemented end-to-end from data model to UI.

Multi-threaded Whiteboard — [Java · Sockets · Multi-threading](#)

Real-time collaborative drawing application supporting concurrent users via multi-threading and socket communication. Designed for reliability under concurrent load.

Salary Bias Detection — ML Report — [Python · scikit-learn · Pandas](#)

Applied supervised ML techniques to detect salary bias across demographic groups. Achieved 15% improvement in prediction accuracy over baseline models through feature engineering and model selection.

Computer Vision — Siamese Network — [Python · PyTorch · Triplet Loss](#)

Designed and trained a Siamese neural network with triplet loss to identify visually similar images across large datasets. Applied to a real-world image similarity classification task.

EDUCATION

Master of Information Technology — [Major in Computing](#)

The University of Melbourne

Graduated Dec 2023

Bachelor of Agriculture — [Major in Agricultural Economics](#)

The University of Melbourne

Graduated Dec 2020

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL

Frameworks & Libraries: React, Node.js, Firebase, React Router, Pandas, NumPy

Web & Cloud: RESTful APIs, Firebase Hosting, Vite, Git, VS Code

Tools & Practices: Agile/Scrum, VBA/Excel automation, Docker, AWS

Data & ML: Data analytics, scikit-learn, computer vision (Siamese networks, PyTorch)

VOLUNTEER & EXTRA-CURRICULAR

- Volunteer Guide, Melbourne University Endeavour Exhibition — coordinated 15 volunteers for an event attended by 250+ visitors.
- Participant, Herald Sun Run for the Kids (14.6km) and Nike Melbourne Marathon Festival (10km).
