PROFESSIONAL SUMMARY

Master of IT (Computing) graduate from the University of Melbourne with direct experience eliciting requirements, mapping business processes, and evaluating systems against documented criteria. Most recently redesigning a national field operations checklist and assessing a CRM platform for a 700+ site service business. Bridges technical and non technical stakeholders, backed by a hands on programming background and agile delivery experience. Seeking a Business Analyst role to apply these skills in a structured, impact driven environment.

EDUCATION

Master of Information Technology Major in Computing — University of Melbourne *Graduated 2023*

Bachelor of Agriculture Major in Agricultural Economics — University of Melbourne *Graduated 2020*

WORK EXPERIENCE

Service Coordinator | Innovative Security and Data — *Jun 2026 – Present*

- Coordinated service and maintenance operations across a national portfolio of 700+ commercial sites, managing job status, technician scheduling, contractor dispatch and purchase order processing while liaising with stakeholders across Australia and New Zealand
- Identified process improvement opportunities by assessing limitations and inconsistencies in existing maintenance documentation. Collaborated with key stakeholders to propose improvements to the form structure and layout, enhancing usability for field technicians.
- Introduced a standardised process to automate the conversion of raw security panel configuration exports into structured, site-specific device checklists, reducing manual preparation and enabling consistent use across the company's portfolio.
- Assessed a job management and CRM platform against business requirements and presented recommendations to leadership to support an informed platform selection decision.

CPT Project Lead | Crown Melbourne — *Jun 2022 – Present*

- Led a cross hotel business improvement initiative across 3 Crown properties, coordinating stakeholders from Front Office, IT, and Hotel Management delivering a 10% reduction in technical service requests through process redesign.
- Identified manual workflow bottlenecks in guest operations; translated operational pain points into system level improvements by designing and deploying Excel VBA automation for the Opera PMS eliminating repetitive data entry across a team processing 300+ daily transactions.
- Functioned and collaborated with multiple stakeholders, gathering requirements from end users and communicating technical solutions in accessible language to non-technical audiences.
- Managed high-volume operational data (reservations, payments, guest profiles), developing strong diligence and data accuracy practices directly applicable to BA deliverables.

Intern Programmer | Doodel Delivery — *Dec 2021 – Mar 2022*

- Contributed to feature development in Java, Python and SQL across two production mobile and web applications, working within an Agile/Scrum delivery framework
- Collaborated with the product team to understand feature intent and translate into technical implementation, developing an early appreciation for the link between business requirements and delivered code
- Worked within a Scrum delivery framework, contributing to sprint planning, backlog refinement, and cross-functional collaboration between owner and teams.

Manager | James An College — *Jan 2018 – Dec 2020*

- Managed day-to-day operations, finance, and contract administration for 60+ clients weekly
- Supervised a small team across scheduling, performance management, and issue escalation, developing stakeholder communication and prioritisation skills.

KEY PROJECTS

Sua Hair Booking & Management Platform *Real Client · In Development · 2024 – Present*

- Conducted requirements workshops with the client to map existing processes and define system needs producing a feature backlog prioritised by business value.
- In Progress: multistep customer booking flow, real time availability engine, admin dashboard with timeline view, client management, and service/pricing management with full price history

IntelliJourney Educational Analytics Platform *University Project · 2023*

- Full stack reporting platform integrating the Canvas LMS API with Firebase to surface actionable data insights for students and educators. Defined user requirements, designed data models, and led delivery as part of a team
- Used Jira and Confluence for sprint planning, backlog tracking and documentation across the 6 month project

Salary Bias Detection ML Analysis *University Project · 2023*

- Applied supervised ML techniques (Python, scikit-learn) to detect salary bias across demographic groups. Translated analytical findings into clear, stakeholder-ready and reporting achieving 15% improvement in prediction accuracy over baseline through structured feature analysis

TECHNICAL SKILLS

Tools & Platforms: Jira, Confluence, Microsoft Suite, SQL
Languages: Java, Python, Git

CORE COMPETENCIES

Requirements Elicitation & Analysis · Process Mapping & Improvement · Stakeholder Engagement · User Story Writing
Agile / Scrum Delivery · Data Analysis & Reporting · UAT & Testing Support · Documentation & Communication

VOLUNTEER & EXTRA-CURRICULAR

- Volunteer Guide, Melbourne University Endeavour Exhibition coordinated 15 volunteers for an event attended by 250+ visitors.
- Participant, Herald Sun Run for the Kids, Nike Melbourne Marathon Festival and upcoming Queenstown Marathon
